## STANDARD CROSS SECTION

## TOUCHSTONE KEY FEATURES

- Double Glazed;
- Windows can be used internally and externally;
- Operable window configurations available;
- Custom frame options available.

Touchstone Awning (horizontal opening) and Casement (vertical opening) windows are designed to give your new or renovated home a distinctive style as well as ventilation control. Their appearance is sleek and flush with your external walls because of the sash profile on the window's exterior.

The use of stainless steel hardware ensures a long life of hassle free operation. The slimline chainwinder gives you easy fingertip control and has a dedicated transom (rail) to prevent you struggling with flyscreens when opening and closing your window.

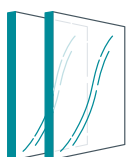

We understand the importance of weatherproofing when it comes to windows. Awning windows provide a hood effect so light rain won't usually penetrate, even when they are open. We ensure your awning or casement style windows are highly weather resistant with features including a continuous PVC twin-seal system in the track to keep out rain and extra noise.

Touchstone Casement or Awning Windows are available in a variety of configurations and a range of colours to suit your home's design and colour scheme. Of course, Touchstone Casement or Awning Windows come with Double Glazing Australasia's seven year guarantee for your peace of mind.

*Other products available in the Touchstone range:*

Sliding Doors and Windows, Bi-Fold Doors and Windows and Hinged Doors.

*The 'Touchstone' series utilises*
